Dirk Gibson is the local (Temple and Belton) sponsor for Parkbench—a weekly newsletter and website aggregator for local entities, businesses, and events. Advertise, review, and connect with others in your community via Parkbench.

In large cities, park benches have been designed to prevent people from sleeping on them. These benches have been constructed so that the seat slopes at an angle, which requires the user to support themselves entirely with their feet. Another common design deterrent is to include armrests down the center of the bench, preventing the user from laying down across the seats. This type of design is commonly referred to as "Hostile Architecture."
